TECHNICAL SKILLS

Programming Languages

- Python
- Java
- C / C++
- JavaScript / HTML
- Kotlin (mobile development)

Security & Networking

- Wireshark (packet analysis)
- Nmap (network scanning)
- Kali Linux

Development Tools

- VS Code
- Git / GitHub

CORE COMPETENCIES

- Network security fundamentals
- Vulnerability assessment basics
- Digital forensics fundamentals
- Systems administration
- Mobile application development
- Fast learner, self-directed

CERTIFICATIONS

Google Cybersecurity Professional Certificate — Coursera

Verify: coursera.org/.../D7ZNPT18VNRJ

Ethical Hacker (Ongoing) — Cisco

LANGUAGES

English

PROFESSIONAL SUMMARY

Information Security and Forensics enthusiast at KCA University with a broad, hands-on technical foundation spanning network security, programming, and systems administration. Holder of the Google Cybersecurity Professional Certificate, with practical experience using industry-standard tools such as Wireshark, Nmap, and Kali Linux to analyze network traffic, identify vulnerabilities, and understand attacker methodology. Comfortable working across multiple programming languages, including Python, Java, C, C++, JavaScript, and Kotlin, with additional exposure to mobile application development. Combines a strong academic grounding in cybersecurity and digital forensics with an interdisciplinary background in psychology and sociology, giving a well-rounded perspective on security awareness, human factors, and risk. Currently seeking a remote, entry-level opportunity in cybersecurity, IT support, or software development, with the drive to learn quickly, take ownership of problems, and grow into a specialized technical role.

EDUCATION

KCA University — BSc in Information Security and Forensics *Coursework t*
Nairobi, Kenya | Graduation conferral: November 2028

- Relevant coursework: Network Systems Administration, Wireless Networks, Simulation and Modelling, Anonymity of the Internet, Forensic Psychology, Introduction to Sociology
- Interdisciplinary program combining technical security training with the psychology and sociology of human behavior, digital privacy, and risk

PROJECTS

- IoT Network Vulnerability Scanner— Scans IoT networks for vulnerabilities, stimulates attacks, and collects forensic evidence.
- Password Security Analyzer — Analyzes password strength and provide security recommendations.
- Digital Forensic Tool— Extracts file metadata, hashes, and other information for forensic investigation.
- Network Port Scanner — Scans devices for open ports and identifies running network services.

ADDITIONAL STRENGTHS

- Strong analytical and problem-solving mindset developed through coursework in network simulation and modelling
- Adaptable across security, support, and development contexts, with the technical range to move between roles
- Clear communicator, drawing on coursework in sociology and forensic psychology to understand user behavior and risk
